Electrolyzed Reduce Water, or Kangen Water™, which is alkaline water with potent anti-oxidant power:

Help overcome diabetes as it flushes out the acidic waste in our bodies

Regular consumption of ERW can reduce the blood glucose concentration.

Source: thrid party research

Key Medical Research Findings

**Electrolyzed Reduced Water (ERW) with reactive oxygen free radical species (ROS) scavenging ability**

*Reduced the blood glucose concentration*

*Increased blood insulin level*

*Improved glucose tolerance and preserved β-cell mass in db/db mice*

The present data suggest that ERW may protect β-cell damage and would be useful for anti-diabetic agent.

What Is Diabetes?

Patients with diabetes either can not produce insulin *(Type 1 Diabetes)* or their cells don't respond to it, also known as Insulin-Resistant *(Type 2 Diabetes)*. As a result, the cells can not properly absorb these glucose (sugar) as body's fuel, causing an excessive amount of sugar circulating in the blood. This is known as Hyperglycemia or High Blood Sugar Level.

When acidic waste accumulates in pancreas, it can create diabetes and deteriorate the function of pancreas.

The pancreas (i.e. the pancreatic β-cells) is sensitive to Free Radical attack when exposed to oxidative stress.

Glucose & Insulin

Foods are broken down to simple sugar, known as glucose. The glucose then circulates in your blood before entering cells as fuel. But for glucose (fuel) to enter a cell, it must be transported by a hormone produced by the pancreas, insulin.

Did You Know?

Diabetes is the most significant cause of adult blindness in the non-elderly!

Diabetes is the leading cause of non-traumatic amputation in adults!

Complications

- Heart Attack
- Nerve Damage
- Chronic kidney Disease
Erectile Dysfunction

Blindness (Retinal Damage, Diabetic Retinopathy)

Amputation (due to gangrene formation)

Poor Healing Of Wounds

Kidney Failure

Pancreas

When ever foods enter the digestive system, the pancreas produces a hormone called insulin. Insulin acts as a key, which opens the cells for absorbing glucose.

Pancreas is located behind the stomach.

Causes

It is a lifestyle disease, triggered by

- Obesity
- Over acidity
- Lack of exercise
- Increase age

Symptoms

- Too much glucose (blood sugar)
- Increased thirst
- Increase urination
- Fatigue
- Weight loss
Even genetic predisposition

Degraded vision

Treatments

- Daily insulin injections
- Medication

Some patients with diabetes need to inject insulin every day in order to reduce the blood sugar level in their blood.

KANGEN TESTIMONIALS

My name is Franklin. When I was 10, I was diagnosed with Juvenile, Type 1 Diabetes (insulin dependant). I’ve been drinking Kangen™ water for 5 weeks and my blood sugars are more stable in the 80 to 140 range. My parents listened to a radio talk show featuring Dr. Dave Carpenter who had a patient with Type 1 diabetes. His patient was able to get completely off insulin after drinking Kangen™ water for 2 years. His Alpha (eyelet) cells regenerated and produced insulin again when his pH became more alkaline with Kangen™ water. I know this can happen in my body, too.

I also have Aspergers Syndrome (high functioning Autism), which makes it hard for me to stay focused and follow instructions. My teachers and parents can’t believe the radical improvement in my focus and attention span since drinking Kangen™ water. I didn’t like drinking water before, but I like Kangen™ water. It tastes good.

Hello! My name is Phil Richardson and I recently did an interview with Martin Johnson who has experienced some amazing results from drinking Kangen water.

Martin, along with his girlfriend Dana has been dropping by my house on a weekly basis since June of 2008 to fill up about 25 gallons of Kangen water with each visit. It has become such an important part of their health that they cannot part from it. They would love to have their own machine but are not in a financial position to purchase one at this time. I do not charge them for the water because I feel it is better to give than receive.

During the interview, Martin goes into great detail about his high blood pressure and diabetes. Before Martin started to drink the water, he had a high blood pressure of 170 and a count of 580 for his diabetes. Over the course of a few months, his conditions improved significantly. Martin’s high blood pressure went from a high of 170 to a normal 120 and his diabetes went from a high of 580 to a count of 200 to 240 and all he changed in his diet was switching to Kangen water.

I am a 67 year old male having had type 2 diabetes for over 20 years, taking Novalog insulin 3 times a day, and Lantus insulin at night.

My sugar averaged 139.5. It occasionally would hit 228 after overeating.

After Drinking a gallon of Kangen water each day for 15 days, my blood sugar dropped to a seven day average of 104. It hit a low of 76, and has not spiked over 160.

I am going to my doctor to reduce or take me off of insulin, before it goes low enough to put me into insulin shock.

I have much more energy than I have had in years.

I have not changed my eating habits, having eaten at all-you-can-eat buffets twice in the last week.
